

Dear fellow students,

**Berlin Exchange Medicine**, the **first journal for student research** in life sciences in the German-speaking world, starts its **first call for papers!**

For our Section “Medical Humanities” we are looking for articles in the fields of philosophy, theory of medicine, humanistic approaches to current issues. The section addresses everything theoretically concerned with medicine, health and disease – from scientific theory of medicine, conceptual analyses to medical-ethical issues and essayistic approaches to these topics.

It is the aim of this section to offer several discourses in medicine, health science and philosophy a mutual platform in order to enable and intensify interdisciplinary exchange.

You feel you have an idea worth sharing? You don't want your seminar paper or thesis be written just for the sake of a grade? You are motivated to publish and take part in a wider discourse during your studies already? You feel like thinking and living the former scientific practice in a new way? Then submit your paper to *Berlin Exchange Medicine*! As a genuine student project, we offer a platform to students who are enthusiastic about research, and show how diverse, elaborate and exciting student research can be!

Take a look at our [website](#) to learn which formats can be published in *Berlin Exchange Medicine* and feel free to contact us directly through [editorial.medicine@berlinexchange.de](mailto:editorial.medicine@berlinexchange.de).

**In short:**

***What?*** Projects from seminar papers, theses about topics connected to the life sciences.

***Who?*** All students engaged in healthcare, life science and philosophy – regardless of study progress and research experience.

***Why?*** Because research already begins during the studies, student ideas and work need a platform and deserve critical, constructive and transparent feedback.

***When?*** Starting from 3 November 2021. We expect the first Special Issue in Spring 2022 and accept submissions throughout!

We are excited about you and your research!

BEM. Engaging Students of All Health Professions in Research. \_\_\_\_\_
